OWASP Top 10 & API Security Guide

A KnightVerse Premium Resource

1. Broken Access Control

   - Description: Restrictions on what authenticated users are allowed to do are not properly enforced.

   - Remediation: Implement role-based access control (RBAC).

2. Cryptographic Failures

   - Description: Failures related to cryptography which often lead to sensitive data exposure.

   - Remediation: Encrypt data at rest and in transit.

3. Injection

   - Description: User supplied data is not validated, filtered, or sanitized by the application.

   - Remediation: Use parameterized queries.
